Executive Summary

Skilled in **full stack development** with hands-on experience in **React.js, Django, Laravel, REST APIs**, and **PostgreSQL**, backed by a **Bachelor's degree in Computer Science and Engineering**. The role requires proficiency in frontend frameworks, backend technologies, and version control — all of which align with my internship experience building and testing production-grade web applications in **Agile** teams using **Git**. I am confident I bring the technical foundation and collaborative mindset to contribute effectively as a **Full Stack Developer**.

Technical Skills

Frontend: HTML5, CSS3, JavaScript (ES6+), React.js, Bootstrap 5

Backend: Python, Django, Laravel (PHP)

Databases: PostgreSQL, MongoDB, MySQL

Version Control & Tools: Git, GitHub, Postman, VS Code, Selenium, Playwright

AI/ML Technologies: TensorFlow, MediaPipe, Scikit-learn, Pandas, NumPy

Professional Experience

Poorna Technology Consulting, Coimbatore, Tamil Nadu

Oct 2025 – Dec 2025

Role: **Software Development Intern**

- Maintained, debugged, and enhanced **RESTful APIs** for a production blog application using **Django** and **Laravel** across 5 core application modules.
- Designed and executed **automated test suites** using **Selenium** and **Playwright** covering functional and regression testing scenarios, reducing manual QA effort by **40%**.
- Participated in **Agile/Scrum** sprint cycles including daily standups, sprint planning, code reviews, and retrospectives while managing source code versioning and pull requests using **Git** and **GitHub**.
- Worked with **PostgreSQL** to write optimized queries, manage migrations, and maintain database integrity across modules, shortening the release cycle by **1 week** through automated regression test coverage.

Leader's Desk, Coimbatore, Tamil Nadu

Jun 2025 – Aug 2025

Role: **Frontend Development Intern**

- Developed responsive and reusable **UI components** for an online learning platform using **HTML5, CSS3, JavaScript (ES6+), React.js**, and **Bootstrap**, ensuring cross-browser compatibility across multiple devices.
- Worked with **React.js hooks**, component-based architecture, props, state management, and **REST API** integration to build dynamic frontend modules and improve user interaction.
- Collaborated with team members in frontend development tasks using **Git** for version control while following clean coding and task-based sprint practices.

Projects

Sign Language Assisted Video Calling System

2025 – 2026

Final Year Project | React.js, Django, TensorFlow.js, MediaPipe, WebRTC, PostgreSQL, JWT, Web Speech API

- Engineered a **real-time sign language assisted video calling system** enabling seamless communication between deaf, mute, and hearing users using **MediaPipe** hand landmark detection and a **TensorFlow.js** gesture recognition model.
- Built a **React.js** frontend with live webcam integration that captures hand gestures, processes 21 hand landmarks, and renders **real-time text captions and speech output** via the **Web Speech API**.
- Architected a **Django** backend with **JWT authentication**, **WebRTC** video calling, **WebSocket** support, and **PostgreSQL** database for secure user management, chat storage, and downloadable PDF transcript generation.
- Achieved **82% gesture classification accuracy** and integrated multilingual translation (Tamil, Tanglish) support to enhance accessibility across education, healthcare, and workplace domains.

Dani LMS – Role-Based Learning Management System

2025 – 2026

React.js, React Router DOM, Context API, Bootstrap 5, localStorage

- Developed a fully functional **Role-Based LMS** with separate **Admin**, **Trainer**, and **Student** portals using **React.js** and **Context API** for state management.
- Implemented **authentication system** with role-based routing, **protected pages**, and session management along with **Admin dashboard** featuring trainer management, course approval workflow, batch management, analytics, and student reporting.
- Developed **Trainer portal** with course creation, module management, MCQ creation, coding test management, assignment monitoring, and student progress tracking.
- Created **Student portal** with module-based learning, YouTube video learning system, MCQ tests, coding tests, assignment upload, and progress tracking with **fullscreen detection** and **tab-switch monitoring** during assessments.

Multi-Vendor E-Commerce Platform

2025 – 2026

Laravel, PHP, PostgreSQL, Redis, WebSockets, Blade, Google OAuth

- Designed and developed a **full-stack multi-vendor e-commerce platform** with **3 role-based panels** (Admin, Vendor, Customer) using **Laravel MVC** and **Blade templating**.
- Implemented **vendor product management** with unlimited product listings, inventory tracking, and order fulfillment workflows.
- Integrated **Google OAuth** via Laravel Socialite and **async Redis job queues** for payment, inventory, and shipping processing.
- Developed **real-time order notifications** using **Laravel Reverb WebSockets** across all user roles and designed **PostgreSQL** schema for scalable multi-vendor data management.

Education

Bachelor of Engineering – Computer Science and Engineering

Kathir College of Engineering, Coimbatore, Tamil Nadu

2022 – 2026

CGPA: 7.9 / 10.0

Certifications

- **Software Engineering and Agile Development** – Infosys Springboard
- **GenAI and Data Analytics Simulation** – TATA Forage
